

metaphlan2

```
graph TD; metaphlan2 --> mergeprofiles; metaphlan2 --> getmarkers; mergeprofiles --> heatmap; mergeprofiles --> all; heatmap --> all; getmarkers --> strainphlan; strainphlan --> all;
```

A flowchart illustrating a data processing pipeline. At the top is a light green rounded rectangle labeled 'metaphlan2'. Two arrows point down from it to 'mergeprofiles' (a light green rounded rectangle) on the left and 'getmarkers' (a light blue rounded rectangle) on the right. From 'mergeprofiles', two arrows point down to 'heatmap' (a light green rounded rectangle) and 'all' (a red rounded rectangle). From 'heatmap', an arrow points down to 'all'. From 'getmarkers', an arrow points down to 'strainphlan' (a light orange rounded rectangle). From 'strainphlan', an arrow points down to 'all'. The 'all' node is at the bottom center.
